

HASNAT AHMED GOHEER

Full Stack Software Engineer

Islamabad, Pakistan | +92 337-4168203 | ch.hsyahmedgoheer@gmail.com

GitHub: [Hasnat-Ahmed-Goheer](#) | LinkedIn: [Hasnat Ahmed Goheer](#)

PROFESSIONAL SUMMARY

Full Stack Software Engineer with **2+ years** of end-to-end ownership across **cloud-native infrastructure**, **AI-integrated products**, and **FinTech platforms**. At Stack8s, owns the full engineering surface — authoring production Helm charts, orchestrating Kubernetes workloads via Rancher, overhauling authentication architecture, and delivering the frontend and backend that enterprise customers like **Imperial College London** run on. Brings a builder's mindset to ambiguous problems and a track record of measurable impact across every layer of the stack.

TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), TypeScript, C++, Python, SQL

Frontend Development: Next.js, React, Redux Toolkit, TanStack Query, Tailwind CSS, Material-UI, shadcn/ui

Backend Development: Node.js, NestJS, Express.js, FastAPI, RESTful APIs, JWT Auth, OAuth 2.0

Cloud & DevOps: AWS (S3, EC2, Lambda, ELB, API Gateway, VPC), GCP, Docker, Kubernetes, Helm, Rancher, GitHub Actions, NGINX, Linux

Databases & Storage: PostgreSQL, DynamoDB, MongoDB, Prisma ORM, Pinecone (vector), Firebase

AI Engineering: Retrieval-Augmented Generation (RAG), Multi-modal AI Systems, Gemini API

FinTech & Integrations: Stripe Connect, Google Calendar API, Google Meet API

Architecture & Design: Microservices Architecture, Clean Architecture, Event-Driven Design

PROFESSIONAL EXPERIENCE

Eprecisio Technologies

January 2026 – Present

Full Stack Software Engineer | *Deployed to Stack8s*

- Eliminated distributed Auth0 token validation across the codebase by centralizing all access_token checks to the backend — cutting auth-related code by **~60%** and decoupling the system from Auth0 so a provider swap requires minimal engineering effort.
- Authored **10+ production Helm charts** from scratch — packaging custom container images in GHCR for services unavailable on Bitnami — extending the Stack8s application marketplace now used by enterprise customers including Imperial College London
- Delivered full-stack support for **5 Kubernetes** workload types (Deployments, CronJobs, Jobs, StatefulSets, DaemonSets) through Rancher, owning both the Next.js configuration UI and the FastAPI backend provisioning pipeline end-to-end
- Engineered a Rancher-based worker node provisioning and decommissioning pipeline, enabling self-serve infrastructure scaling across a unified Kubernetes control plane spanning **15+ cloud** and **on-prem environments**

Wanile Technologies

August 2025 – January 2026

Full Stack Software Engineer

- Architected the **DIY General Contractor** platform from scratch in NestJS and Next.js using **Clean Architecture** with **Repository Pattern** and **domain-driven design**; enforced multi-tenant access through **RBAC** backed by MongoDB, serving contractors, consultants, and homeowners on a single platform
- Built a RAG-based AI Assistant on Gemini API and Pinecone vector databases enabling **multi-modal project scoping**, cutting manual estimation time by **20%**

- Engineered a WebSocket messaging system with AWS S3 file uploads sustaining **500+ daily conversations** at sub-200ms latency on GCP with 99.9% uptime SLA; reduced **P95 TTFB** from 800ms to under **300ms** through MongoDB index tuning and CloudFront CDN
- Built Stripe Connect payment infrastructure processing **300+ automated vendor payouts** monthly, integrated with Google Calendar and Meet APIs for real-time consultation scheduling

SwapFans.ai

April 2025 – June 2025

Full Stack Developer

- Developed responsive UI for AI face-swap platform using React, Next.js, and Tailwind CSS, serving **10,000+ monthly active users** with mobile-first design principles
- Architected real-time file upload system with progress tracking, reducing user abandonment by 15% during the upload process
- Built reusable component library with Headless UI and custom React hooks, **accelerating feature delivery** by **10%** and reducing UI code duplication by **35%**

Techvaganza

April 2024 – September 2024

Full Stack Software Engineer & Team Lead

- Deployed a Next.js corporate platform containerized with Docker, served via Nginx reverse proxy on AWS EC2 with auto-scaling — sustaining 99.9% uptime at sub-2s load times
- **Led 3-person** development team through agile sprints, delivering **30% faster feature releases** through optimized task distribution and requirement refinement
- Established **CI/CD pipeline** using GitHub Actions and automated deployment workflows, reducing deployment time from 1 hour to 15 minutes and eliminating manual deployment errors

ARIS Rails

January 2024 – May 2024

Full Stack Developer

- Built a real-time railway tracking system in Next.js and Pocketbase, visualizing live train movements across **500+ routes** for **50+ railway operators**.
- Optimized the GPS processing pipeline to handle **10,000+ coordinates** per minute at **sub-100ms** latency using map clustering and tile caching.

Intellogeek

June 2023 – January 2024

Frontend Developer

- Delivered a full LMS platform with course creation tools, instructor dashboards, and an integrated Stripe gateway processing **300+ monthly transactions**.
- Cut initial page load by **45%** through frontend caching and code-splitting, while collaborating with backend to design and integrate RESTful APIs.

EDUCATION

COMSATS University Islamabad

September 2021 – June 2025

BS in Computer Science | CGPA: 3.2/4.0

Relevant Coursework: Advanced Data Structures & Algorithms, Web Technologies, Database Systems, Software Engineering, Artificial Intelligence, Machine Learning, Operating Systems.
